## 🇮🇳 India Just Overtook China! 🇨🇳

India is now the world's fastest-growing private jet market ✈️

- 25% growth in just 3 years
- China's fleet fell by one-third in the same time
- India already has 490+ jets, projected to cross 70 by 2029
- This isn't just about "rich people buying toys."
  - 👉 It's about economic transformation.
  - 👉 It's about time = money in high-stake business.
  - 👉 It's about India producing enough ultra-high-net-worth individuals to make private aviation sustainable.
- One industry leader put it perfectly:
  - 💡 "If you make more money by saving by flying private instead of commercial, the jet pays for itself."
- And India is responding—new airports, private terminals, and specialized services are rising to meet the demand.
- Because in global business today, speed and flexibility aren't luxuries—they're competitive advantages.
